

ABSTRACT

The invention relates to a computer-based vehicle reservation system in addition to a method for a computer-based vehicle reservation system. According to said method: the availability of all vehicles (52/53/54) in the vehicle reservation system is detected; the user (10) reserves a vehicle (52/53/54) for a determinable time and/or period and/or location by means of a computing unit (20) that is connected to a central unit (30); an identification code (411) is transmitted to a mobile radio device (40) of the user (10) by means of an SMS module (33) of the central unit (30); the user (10) is identified in an identification module by the identification code (411) and the vehicle (52/53/54) is released for use. In particular, the billing process for the related services can be automated by said method and system.
